沉沦入圈三年从穷小子到翻身躺平的心路历程

沉沦.

Lv 7

嗨咯呀各位，好久没回来了，不知道还有没有人记得我呢，前两年某个风波导致以前的账号都注销了，刚好今晚睡不着突然想起向前论坛，以前刚入圈那会也是没日没夜的刷论坛想找寻出路，现在回忆只有感慨...

就从最初了解这个行业开始说起吧，在2021年无意间了解到有C圈这个行业，但是当时还在上学，加上那段时间套彩赚了点小钱，也感觉C圈的操作很复杂，便没有深入了解就搁置了...

2022年初，临近毕业，出来工作实习，刚开始还比较顺利，可以约到面试，在面试几家后便收到了offer，月薪8k，但是距离住的地方太远，也有可能是蜜汁自信，就没有去上班，再后面面试了几家过后，就再也约不到面试了，就这样浑浑噩噩混了两三月之后，彻底没钱了，也就是这段时间，人生迎来了转折点...

大概是在22年9月份左右，我想起了这个行业，当时只能在网上看各种只言片语，但是也大致了解到这个行业外行人看来运转流程：买料，找各种网站刷料，找人收货，变现

一开始什么人不认识，也不知道上哪加群，也不知道向前论坛，网上找的料站各种各样，充斥的各种假料站，无从下手，在知乎上也能刷到各种骗子在利用这个行业收割小白，在评论区我看到了一位老哥，加上了老哥的微信之后，他跟我说了很多关于这个事情，后来我才知道这个老哥也是向前论坛的一份子...

了解完基础理论之后便开始实践，那个时候身上没有一分钱，网贷借了两万，开始C圈之路...

一个月的时间里，没日没夜的看各种教程，什么环境啊网啊，各种乱七八糟各种玄学。就这样我在一个月的时间成功的亏完了两万块钱...真操蛋

在跟老哥聊天时，他了解到我学的是it行业，在当时那个源码都不好找又贵的年代，老哥让我帮他写一个CA源码，就让我做完他给我钱，也没说具体多少钱，反正我也

向前故事会

- 展示位 [点击查看](#) [点击购买](#)
- GodCheck全球... 出paypal KYC户
 - 各国SSN个人企... 高活率低价格二...
 - 卷王CVV 电脑远控+手机...
 - 电脑远控+手机... 全兼所有数据库...
 - 代充游戏买礼品卡 高质量 美国 一...

没办法了，那就做呗，就这样我的源码之路开始了

在一个星期之后，我的第一版源码出来了，我给老哥搭建好，各种东西准备就绪之后，老哥却一直说没时间，又过了几天之后，我实在等不了了，我开始加各种群，做了很多关于搭建方面的教程引流（现在已经清空了），我相信这些教程当时应该教会了很多人

在当时市面的源码普遍价格在500u，800u，1000u的时候并且还在使用短链防红的时候，我以200u每月的价格，加上独特的动态防红，基本一个域名平均都是用一个月以上，钓鱼佬应该知道这个水平是什么程度，加上前端制作基本一比一还原，在当时也是火了一段时间

同时黑子也是很多，王多鱼应该也清楚，虽然我现在已经不做源码了，但是我还是附和王多鱼那句话，偷鱼死妈

在我刚开始起步的时候杰尼龟也找上了我，想给我谄安，当时也是纠结了一阵子，最后还是决定自己做，不想再打工了

就这样，从最开始的每天各种群刷广告，到后来不需要发广告也会有客户介绍客户，这个期间也教会了很多小白，很多就算不买源码的我也会解答问题，一直持续到23年六七月份...

在这之前我从来没有自己钓过鱼，都是通过跟群友的交流了解的，因为当时每个月卖源码就能近乎卖20万，这对于一个前段时间还是普通打工人的我还想啥呢

后来通过群友了解到了im，便开始尝试钓鱼，自此就陷进去了，那段时间真是C圈的狂欢，我也是第一次尝试到了什么叫一天啥事不干躺着赚20万的感觉，但是好景不长，只持续了几天im就风控了

从最开始的成本十几块一条鱼转手卖40，到后来一步步缩减利润，直到有时候一晚上发出去收回来还得倒亏几千u，那时每天发几十万的信出去，同时也被老外一些博主盯上了，为了避一下风头，我把频道所有内容和教程清空，个人频道人数也从两千多人掉到一千人，以前的TG名 @chenlun 也改掉了，加上各种同行崛起，我觉得源码这个行业实在太卷了，自此彻底放弃源码行业..

一直持续到24年初, 2D鱼彻底发信发不动之后, 我开始摆烂了, 出去旅游了一趟回来, 发现没有我能干的活了, 就退休直到现在...

当初教过的很多小白, 大多数应该都退圈了, 大环境所致, 我的会员群里现在都已经很多人不上线了, 但是也有一部分很脱类拔粹的, 现在有些做同步去了, 有些在做料站, 后来偶尔有联系的, 发现当时的小白现在也是大佬了, 赚几百个的比比皆是, 这里我不是说我有什么功劳, 只是感慨, 我当时也是这么走过来的, 同样都是小白, 同样都是遇见愿意无偿帮助的人, 在向前论坛里我相信有很多这样的一群人

在这里给小白一个忠告:

没有人会永远无偿帮助你, 要对帮助你的人心怀感激, 在问问题之前最好自己先了解一遍, 有个东西叫谷歌, 实在不懂再去问会好很多, 没有人会喜欢只会动口不动手的残疾人

这个行业能赚到钱的人总是那一小部分人, 特别是现在各种风控越来越严的时代, 不要觉得自己很惨, 最初入这行的每个人都是极度缺钱的, 没赶上时代的红利, 那就只能靠加倍努力

昨晚跟一哥们聊天, 去年赚了两百个, 今年全被股东卷跑了, 今年200u重新起步一样玩起来了, 我很佩服他, 不放过任何一个赚钱的机会, 能利用的资源全利用上了, 值得学习, 这种人想不赚都难

目前是打算重新开工做同步鱼，但是前路如何尚未可知，还在准备阶段..

Chenlun's journey from a poor kid to a successful celebrity in three years

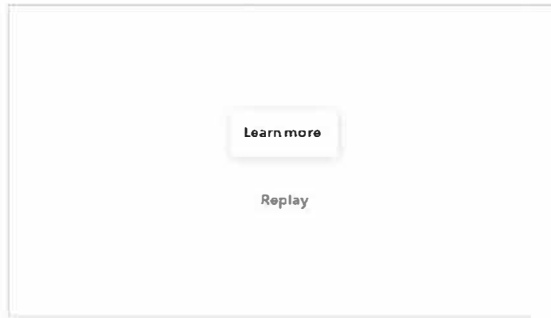

Chenlun Lv 1

Hi everyone, it has been a long time. I don't know if anyone still remembers me. A certain controversy in the past two years caused my previous account to be canceled. Just tonight, I couldn't sleep and suddenly remembered the Forward Forum. When I first entered the circle, I was also browsing the forum day and night trying to find a way out. Now, looking back, I only feel emotional...

Starting from when I first learned about this industry, I accidentally learned about the C-circle industry in 2021, but I was still in school at that time, and during that period I made a little money from playing the lottery. I also felt that the operations of the C-circle were very complicated, so I put it aside without gaining an in-depth understanding...

At the beginning of 2022, when I was nearing graduation, I went out to work as an intern. At first, things went relatively smoothly, and I could get interviews. After interviewing at several companies, I received an offer with a monthly salary of 8k, but it was too far from where I lived, and maybe because of my mysterious self-confidence, I didn't go to work. After a few more interviews, I could no longer get any interviews. After muddling along for two or three months like that, I completely ran out of money. It was during this period that my life reached a turning point...

Around September 2022, I remembered this industry. At that time, I could only read various snippets online, but I also roughly learned about the operating process of this industry from an outsider's perspective: Buy materials, find various websites to get materials, find people to receive goods, and cash out

At the beginning, I didn't know anyone, I didn't know where to join groups, and I didn't know about the Forward Forum. The material sites I found online were all kinds of different ones, full of all kinds of fake material sites, and I had no way to start. On Zhihu I could also see all kinds of scammers using this industry to harvest newbies. In the comments section, I saw an older brother, and after adding his WeChat, he told me a lot about this industry. Later I learned that this older brother was also a member of the Forward Forum...

After understanding the basic theory, I began to practice. At that time, I didn't have a penny on me, so I took out an online loan of 20,000 and began my C-circle journey...

For a month, I watched all kinds of tutorials day and night: environments, gateways, all kinds of messy and mysterious stuff. In this way, I successfully lost 20,000 bucks in a month..Fuck.

When I was talking to my older brother, he learned that I was studying IT. At that time, when source code was hard to find and expensive, my older brother asked me to help him write a CA source code for him. He said that he would give me money after I finished it, and he did not say how much. Anyway, I had no choice, so I did it. That's how my path with source code began.

A week later, my first version of the source code came out. I set it up for my brother, and after everything was ready, my brother kept saying he had no time. After a few more days, I really couldn't wait anymore. I started joining various groups and making a lot of tutorials about how to set things up to attract traffic (now deleted). I believe these tutorials taught a lot of people at that time.

At that time, when the general price of source code on the market was 500u, 800u, or 1000u, and people were still using short-link anti-blocking. I charged 200u per month, plus a unique dynamic anti-blocking method. Basically, a domain name could be used for more than a month on average. Phishers should know what level that is. Plus, the front end was basically reproduced one-to-one. At that time, it was also popular for a while.

At the same time, there were also many haters. Wang Duoyu should also know that although I am no longer doing source code, I still agree with what Wang Duoyu said: anyone who steals fish, may their mother die.

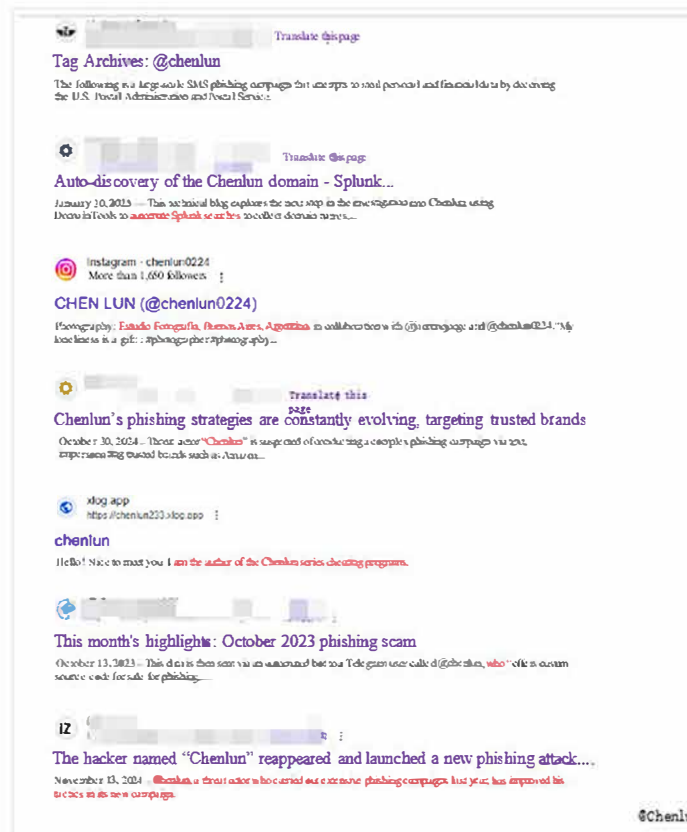

When I first started, Squirtle also approached me, wanting to recruit me. At that time, I struggled with it for a while, but in the end I decided to do it myself. I didn't want to work for someone else anymore.

In this way, from the very beginning, spamming ads in various groups every day, to later, when even without advertising, customers would introduce other customers, during this period I also taught many newbies. I would also answer questions for many people even if they didn't buy the source code, and this continued until June or July 2023...

Before this, I had never done phishing myself. I learned about it through communication with group members, because at that time, just by selling source code I could sell nearly 200,000 per month. For someone like me who until recently had been an ordinary worker, what more could I ask for?

Later, I learned about it through group members and began to try phishing, and from then on I was hooked. That period was really a carnival for the C-circle. It was also the first time I experienced what it was like to make 200,000 a day lying down doing nothing, but the good times didn't last long. It only lasted a few days before it imposed risk controls.

From the initial cost of more than 10 bucks per phish and reselling for 40, to later gradually reducing profits step by step, until sometimes after sending them out at night and collecting, I would still end up losing a few thousand u. At that time, I was sending out hundreds of thousands of messages every day and was also targeted by some foreign bloggers. In order to avoid the limelight, I cleared all the content and tutorials from the channel. The number of people in my personal channel also dropped from more than 2,000 to 1,000. The former TG name @chenlun was also changed. Coupled with the rise of various peers, I felt that the source code industry was just too competitive, so I completely gave up the source code industry from then on.

It continued until early 2024. After 2D Fish completely stopped sending messages, I started slacking off, went on a trip, and when I came back, I found that there was no work I could do, so I retired and have stayed that way until now...

Many of the newbies I taught back then have probably left the scene, because of the overall environment. Many people in my members group hardly come online now, but some are really outstanding. Some have gone into doing syncing, some are running data sites, and I occasionally keep in touch with some of them. I've found that the newbies back then are big shots now, with people earning hundreds everywhere. I'm not saying I deserve any credit, I'm just emotional because I walked the same path back then—I was a newbie too and also met people who were willing to help for free. I believe there are many such people on the Forward forum.

Chenlun's journey from a poor kid to a successful celebrity in three years - Forward Forum

10/29/25, 9:56 AM

Here's a piece of advice for newbies:

No one will ever help you for free forever; you should be grateful to the people who have helped you. Before asking questions, it's best to first look into it yourself—there's something called Google. If you really still don't understand, then asking will go much better. No one likes a handicapped person who only moves their mouth and not their hands.

The people who can make money in this industry are always just a small minority, especially now in an era of increasingly strict risk controls. Don't think you're especially miserable; everyone who first entered this industry was extremely short of money. If you didn't catch the dividends of the era, then you can only rely on working twice as hard.

I chatted with a buddy last night. Last year he made 200, and this year it was all taken away by shareholders. This year he started again from 200 and is playing the same way. I really admire him; he doesn't let any opportunity to make money slip by, and he uses every resource he can. He's worth learning from; it's hard for someone like that not to make money.

At present, we plan to restart work on SyncFish, but the road ahead is still unknown; we are still in the preparation stage..

Chenlun's journey from a poor kid to a successful celebrity in three years - Forward Forum

10/29/25, 9:56 AM

Old TG: **@chenlun was already registered by someone else after I changed my ID, so everyone is worried about scammers impersonating me**

Currently using TG: **@sinkinto01 @sinkinto02**

Personal channel: **<https://t.me/sinkintopd>** (currently there is no content on the channel, and there may be some business in the future)

Chat group: **<https://t.me/sinkintojl>**

回复可见 关于杰尼龟跑路后突发奇想做了个机器人的事

沉沦.

Lv 7

上个帖子不是发完说最近回来了, 然后想开同步, 琢磨了半天不知道该怎么上手, 然后就找到以前的朋友请教, 一顿操作猛如虎, 感觉挺简单的, 但是就是苹果pay得吃ID, 一般的ID还都不行, 绑不上卡, 问了几个人之后了解到, 要不就是通过买大量的账号, 一个个绑砸钱测试, 对我来说那肯定行不通, 我的习惯是先赚到钱之后才会继续拿钱砸

所以就想了个办法, 做了一套新源码出来, 但是以前的老后台又不想用了, 闲置两年了太老了, 简直是屎山代码, 又花了点时间重新开发了一个新的后台, 做了个苹果官网ID账号的源码, 一切准备完毕之后, 找发im的去发, 刚好那几天五一到了, 一发一个不吱声, 一问一个风控, 再问又五一休假去了...

就这样又闲置了几天, 等到五一过后, 刚好我前段时间发了帖子, 有不少以前的人来找我聊天, 其中刚好有个以前认识的大哥, 闲聊过后, 聊到做源码, 聊着聊着就打算做新源码出来发rcs

又是好几天, 新源码开发完了, 刚好那天rcs正常, 就发了一点测试, 第一次自己做的同步说实话还是有点紧张的, 结果发很快, 一下子来一堆鱼, 手慢脚乱, 加上新后台不完善, 还有各种bug, 不是自动删除了消息, 就像消息更新是乱跳点不到, 总之一通操作下来, 一条鱼没绑上, 废了算是

然后紧急更新源码, 修复bug, 优化使用, 又这样搞了好几天, 好不容易完事了, 结果rcs风控了, 发了一点压根没鱼来, 一直问机房, 一直没接触风控直到现在, 后面实在耐不住了, 就去找以前发im的机房, 又勾八踩坑了, 有个机房叫“尚信”, 我看他频道有说什么新技术, 改外显, 我就去测试了, 我说就发五千测试, 他一直要求我发一万, 后面还是只发了五千, 还好只发了五千, 发出去一个小时, 短链点击只有20个, 什么概念, 短链的点击都是虚的, 点一次算一次, 我都怀疑他自个点的, 实际不知道有没有点击, 反正就是一个鱼也没上, 后台在线人数不超过1

事后我才反应过来, 他那个所谓的更改“外显”, 不过是在导入数据到通讯录的时候, 改了备注而已, 纯骗自己玩, 反正各位一定小心这个B, 前两年我找他发US的时候就吃量, 发一百万实际可能只发出去50万, 我那时候还一直纳闷, 怎么同样数据我永远比别人上得少, 我还一直以为我数据问题, 这死坑B现在是越来越不要脸了, 估计没人找他发搞改外显这种东西来收割小白

关于杰尼龟跑路后突发奇想做了个机器人的事-向前论坛

10/29/25, 9:58 AM

就这样被坑完之后，又消停了几天，刚好那几天杰尼龟在内部群里说他被按了，但是大伙都心知肚明

同一时间也是几乎他所有的业务都停了，包括开腔手，也冒出来一堆骗子，各种冒充的骗子肆虐，信息都发到我这个退圈两年的人头上来了，我就寻思我也做个机器人，反正又不要啥成本

但是开发机器人必须得PHP或者Python语言才可以实现高级功能，我又完全不懂这些，硬着头皮做，在熬夜了好几天，一天起码有15个小时在做这个机器人，终于，今天做完了，测试了一圈目前没发现有啥bug，就上线了，反正功能很简单，就是曝光，群发骗子，自动踢出骗子，这几天应该还会更新查bin功能，用来增加群聊热度，有啥功能建议的可以在群里提，我会改进，联系方式会放在最底下

刚开始做肯定不能没有骗子数据，所以我在逐步收录各大群的骗子信息，但是奈何api限制，要把图片也全部上传的话工程量太大了，所以收录的其他群信息只有文本内容和骗子基本信息（永久链接等），但是不影响正常投稿使用，投稿发送的图片还是可以正常发布出去的

反正说我蹭热度也好，虚伪也罢，但是我入这个行业以来从来没跑过任何人，也没有骗过任何人，也教过不少小白，只是这些骗子，我都退圈有快两年了，还能发到我这里来，所以干脆做个机器人制裁一下

总之还是希望各位多支持一下，

目前机器人是纯绿机器人，无任何收费，也无任何广告，功能也简单，没有很多花里胡哨的

各位群主如果有需要的，可以支持一下，把机器人拉群里，就能自动踢出骗子了，注意得设置成管理员，不是因为我要机器人当管理员好做点啥，完全是因为机器人只能是管理员才可以读取消息识别骗子加踢出，不然机器人是无法发送信息的

Regarding the story of Squirtle running away and suddenly having the idea to build a robot

Chenlun
Lv 1

The last post wasn't finished, and I said I had recently come back and wanted to start synchronization. After thinking it over for a long time, I didn't know how to get started, so I went to some old friends for advice. After a flurry of operations as fierce as a tiger, it felt quite simple, but Apple Pay requires an ID, and ordinary IDs don't work at all. You can't link a card. After asking a few people, I learned that either you buy a large number of accounts and bind them one by one while burning money to test them, which definitely wouldn't work for me. My habit is to earn money first before I keep throwing money at something.

So I came up with a method and made a new set of source code, but I didn't want to use the old backend anymore. It had been idle for two years and was too old, simply a pile of crap code. I spent some more time redeveloping a new backend and made source code for a phishing Apple official website ID account. After everything was ready, I went to find a data center that sent in to send it out. It just happened to be around Labor Day those few days: whenever I sent, there was no response; when I asked, it was risk control; when I asked again, they had gone on Labor Day vacation...

So it sat idle for a few more days. After Labor Day, I happened to have posted something a while back, and quite a few people from before came to chat with me. Among them happened to be an older brother I used to know. After some small talk, we started talking about making source codes, and as we talked we decided to make new source codes to send via rcs.

After a few more days, the new source code was finished. It just so happened that rcs was working normally that day, so I sent out a bit for testing. To be honest, I was still a little nervous using synchronization I made myself for the first time. It sent very fast, and a bunch of "fish" came in all at once. I was all thumbs, and on top of that the new backend was imperfect, with all kinds of bugs. Either messages were deleted automatically, or message updates jumped around so chaotically that I couldn't click them. In short, after all that operation, not a single fish got bound, so it was basically wasted.

Then I urgently updated the source code, fixed bugs, and optimized usage. After doing this for several more days and finally getting it done with difficulty, rcs ended up under risk control. I sent out a bit and basically no fish came in. I kept asking the data center and still haven't gotten in touch with risk control to this day. Later, I really couldn't stand it anymore, so I went to find

Regarding the story of Squirtle running away and suddenly having the idea to build a robot -
Forward Forum

10/29/25, 9:58 a.m

the data center I had used before to send im, and once again I fell into a damn pit. There's a data center called "Shangxin." I saw on his channel that he talked about some new technology, changing the external display, so I went to test it. I said I'd just send 5,000 for testing; he kept insisting I send 10,000. In the end I still only sent 5,000. Fortunately I only sent 5,000. An hour after it went out, there were only 20 short-link clicks. What does that even mean? Short-link clicks are all inflated; each click is counted once. I even suspect he clicked them himself. I don't even know if there were any real clicks. Anyway, not a single fish came on, and the number of online users in the backend never exceeded 1.

Only afterwards did I realize that his so-called change to the "external display" was just changing the remarks when importing data into the address book. It was pure self-deception. Anyway, you must be careful of this B. When I had him send US traffic a couple of years ago, he also skimmed the volume; send one million and in reality maybe only 500,000 were actually sent. Back then I kept wondering why, with the same data, I always hit less than others. I always thought it was my data problem. This damned pit B is getting more and more shameless now. I guess no one is going to him except newbies to get ripped off with this so-called external display modification.

After getting screwed like that, things quieted down for a few days. Around that time, Squirtle said in the internal group that he had been taken down, but everyone knew what was really going on.

At the same time, almost all of his business stopped, including the Ripper, and a bunch of scammers popped up. All kinds of impersonators were running wild, and the info was even being sent to me, someone who has been out of the circle for two years. So I figured I'd make a bot too, since it basically doesn't cost anything.

However, to develop a bot you need PHP or Python to implement advanced functions, and I don't understand any of that at all. I just gritted my teeth and did it, staying up late for several days, spending at least 15 hours a day working on this bot. Finally, I finished it today. After a round of testing I haven't found any bugs so far, so I put it online. Anyway, the functions are very simple: exposing scammers, mass-sending about scammers, and automatically kicking scammers. In the next few days I should also update a BIN-checking function to increase group chat activity. If you have any feature suggestions, you can raise them in the group and I will improve things. Contact information will be placed at the very bottom. At the beginning I definitely couldn't have zero scammer data, so I am now gradually collecting scammer information from all the major groups. But because of API limits, if I were to upload all the images too, the workload would be too huge, so the other groups' information being collected includes only text content and basic scammer info (permanent links, etc.), but this doesn't affect normal submissions. Images sent with submissions can still be posted normally.

Anyway, call it riding the hype or being hypocritical if you want, but since I entered this industry I have never run off on anyone, never scammed anyone, and I've taught quite a few newbies. It's just that these scammers can still send stuff to me even though I've been out of the circle for almost two years, so I might as well make a bot to punish them a bit.

Anyway, I still hope you can give a bit more support.

At present, the robot is completely free, with no charges or advertising, and its functions are simple, without many bells and whistles.

If any group owners need it, you can add the robot to the group, and it can automatically kick out scammers. Be sure to set it as the administrator. It is not because I want the robot to be the administrator, but because only as an administrator can the robot read messages, identify scammers, and kick them out; otherwise, the robot cannot send messages.

02/09 更新 防红重做，也是本次更新最重要的一部分 重装后台爬虫过滤，

02/09 更新

防红重做，也是本次更新最重要的一部分

重装后台爬虫过滤，可以自动过滤掉一些低级爬虫

重做防红人机验证，集大成之作，加入跳板模式，无感验证，能有效过滤高级爬虫，集成指纹识别等最新技术

支持普通无感验证，和点击验证两种模式，需配合跳板使用，可在使用时随时更改逻辑

后台指令发送回退到之前最稳定的模式，牺牲了一部分性能，但是可以换来更高的稳定性

数据列表域名统计数据新增日期选项

本次更新主要针对短信，电商用户不要设置人机验证，设置了也没用，还会影响正常使用

更新需要前往一键部署站点重新部署

February 9th Update: Redesign of anti-blocking system, and marking of the most crucial part of this update, which includes rebuilding the backend with enhanced crawler filtering.

Updated on 02/09

The anti-blocking system has been completely redesigned, and this is the most important part of this update.

The backend crawler filtering has been reinstalled, which can automatically filter out some low-level crawlers.

The anti-blocking/bot verification system has been completely overhauled, incorporating a springboard mode for seamless verification. It effectively filters advanced web crawlers and integrates the latest technologies such as fingerprint recognition.

It supports both ordinary seamless verification and click verification modes, which require the use of a jump server. The logic can be changed at any time during use.

The background command sending has reverted to the most stable mode, sacrificing some performance but resulting in greater stability.

A date option has been added to the domain statistics data in the data list.

This update primarily targets SMS messages. E-commerce users should not set up human verification; doing so will be ineffective and may even affect normal use.

The update requires redeployment via the one-click deployment site.
